

## TUNING KIT CHECK LIST

Use a real tool box, not a plastic bag!

Put your name on EVERYTHING.

### REQUIRED TOOLS:

- 3-piece vise set (It will last forever, spend the money now on a 3pc)
- Ski waxing iron with temperatures in degrees (NO CLOTHES IRONS)
- Elastics or brake retainers
- File guide at desired angle (Do not buy the KUU icebuster screw type, or ones with shims to change angles. A simple metal angle and TWO spring clamps is the best!)
- Ski tuning file (Not Canadian tire special) 8-10" length, 13-16 teeth/cm
- Paint brush or rag to wipe skis
- Medium diamond stone (200-300 grit; blue)
- Fine Diamond stone (400-600 grit; red)
- Cup for water for stones
- 2 (TWO!) file guide clamps
- Thick (5mm) plastic scraper (No thin 3mm or metal scrapers)
- Scraper sharpener
- Oval Nylon brush (Do not buy the square ones, you will want the oval ones after day 1)
- Oval Brass or Bronze brush
- Training Wax (bulk – non fluoro. Swix Base Prep, Holmenkol Beta Mix are great products)
- Sharpie
- Extension cord

### Strongly Recommended upgrades:

- Sidewall remover
- File brush (Canadian tire, looks like a mini bbq brush)
- ... band-aids, but you won't need them

### For advanced tuning:

- Base edge bevel
